RE: G-P Gypsum Corporation
Lone Tree Wedge Quarry

Dear Mr. Neffler:

The purpose of this letter is to inform you of some minor mining related activity occurring at the Lone Tree Wedge gypsum quarry site formally owned by Western Clay Company. G-P Gypsum is currently hauling about 2 trucks per day of gypsum already removed and stockpiled at the quarry site. No additional disturbance or mining is required to recover this rock. In addition, we plan to repair two sections of the access road that have been severely effected by erosion. These sections are shown on the attached drawing (Detail 3) which was taken from the Western Clay Company Plan of Operations. The drawing detail shows two crossings, one with a 48" culvert and one with a 12" culvert. The crossing shown with a 12" culvert does not presently have a culvert and will be repaired with a 24" culvert. The crossing shown with a 48" culvert has a 40" culvert. Another 40" culvert will be installed at this crossing. Gravel will be brought in to cover these areas. These repairs are necessary to maintain a safe access for the trucks hauling rock.

Please feel free to contact me at 702-643-8100.

Sincerely,

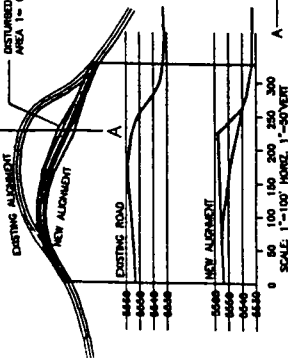

Russell Harms
